SACRAL PROTECTION

Prevalon[®] Turn and Position System

SPECIALLY DESIGNED TO PROTECT THE SACRUM OF LARGER PATIENTS

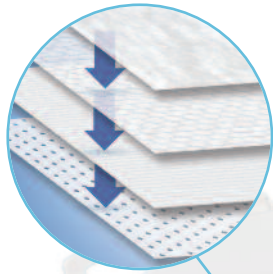

The new **Prevalon Turn and Position System** makes it easier for your staff to turn, reposition and boost patients safely—reducing their risk of injury. Now available in sizes XL and XXL and compatible with wider hospital beds, the system helps staff turn patients from 350 to 550 pounds. It helps prevent patient sacral pressure ulcers by offloading the sacrum, and minimizes stress due to turning and repositioning.

- Reduces staff injury risk resulting from turning bariatric patients.
- Helps prevent patient pressure ulcers.
- Helps control skin microclimate.
- Stays under patient to enhance turning protocol compliance.

*Requires 77% less effort to turn a patient than a draw sheet and pillows!**

REFERENCES: 1. Testing conducted by Sage Products Inc., data on file.

Microclimate Body Pad

Innovative, disposable pads placed under patient to manage heat and moisture.

Four layers to effectively absorb and lock in moisture while allowing air to flow through.

30° Body Wedges

Easily position patients for consistent protection and pressure redistribution.

Include velcro strips that attach to Low-Friction Glide Sheet, locking Body Wedges in place under the patient.

Larger size wedges redistribute pressure for patients up to 550 lbs.

Low-Friction Glide Sheet with Anti-Shear Strap

Stays in place under the patient throughout length of stay.

Full-length, high-strength handles allow multiple clinicians to easily grab the slide sheet and position the patient.

Mattress Cover

Secures to any extra-wide mattress throughout length of stay.

Used in place of a fitted/flat hospital sheet to help reduce friction.
